

Stanford Medicine Residency Research Interest Group Newsletter

Volume 7 Issue 2 | June 2022

Dear Colleagues,

Welcome to the Spring 2022 edition of our medicine residency research newsletter! A special welcome to all our new interns – we hope to support your interest and involvement in research throughout your time at Stanford.

This publication is aimed at both highlighting our residents' exciting projects as well as informing trainees and recruits about the scholarly work taking place at Stanford. We define *research* comprehensively, including scholarly work done in quality improvement, global health, outcomes research, medical education, clinical investigation, translational research, implementation science, qualitative studies, clinical trials, and device/service innovation. Without further ado:

Stanford Annual Residency Research Symposium

This Spring, we hosted our annual Residency Research Symposium! Residents presented posters of their scholarly works and research to the Department of Medicine Chair, Vice Chair, Program Directors, as well as other faculty, fellows and residents.

Resident Spotlight: Emily Woods

Second year resident Emily Woods presented her research work entitled “Factors associated with performance of transesophageal echocardiography in veterans with *Staphylococcus aureus* bacteria”. This project, under the mentorship of Global Health APD Dr. Cybele Renault, characterized the use and performance of TEEs as compared to TTEs – addressing an important question that almost every internal medicine resident is likely to face! In addition to her work on *Staphylococcus aureus*, Emily has also researched *C. difficile* and SARS-CoV-2. A graduate of Emory, Emily completed her MD/PhD with a focus on antimicrobial resistance, and plans to pursue an infectious diseases fellowship.

Scholarly Work:

Congratulations to the following authors for their most recent publications and presentations over the past few months!
